DETAILED ACTION

1. Upon the perfection of priority document, the rejection in Paper No. 5 was overcome.

Claims 1-8 are now rejected under a new ground as below.

Claim Rejections - 35 U.S.C. § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ghitea, Jr. et al ("Ghitea, Jr. ", U.S.P 5693876) and Driscoll et al ("Driscoll", U.S.P 4,180,860).

Regarding claims 1 and 5, Ghitea, Jr. teaches a process and an indicator for visually display of fuel consumption in motor vehicles (see figures 5 and 7) with an electronically controllable display (72), where the display is controlled in such a manner that at least two sets of information (see figure 5, see lines 150 and 152 of figure 7), having an interrelated effect are displayed as a comparison by graphical representation (col 9, lines 49-62). Ghitea, Jr. differs from the claims in that Ghitea, Jr. does not teach that the two sets of information are displayed at the same place alternating with the same type of graphic. However, such feature is well known in the art. For example, Driscoll teaches a display device where in two signals may be alternately displayed at

the same place alternating with the same type of graphic (bar) (see col. 3, lines 10-32) with the advantage being to make available more information at a single convenient location. It would have been obvious to one of ordinary skill in the art, having the teaching of Ghitea, Jr. and Driscoll before him at the time the invention was made, to modify Ghitea, Jr. 's fuel consumption to include displaying two signals alternately at the same place with the same type of graphic (bar) taught by Driscoll with the motivation being to make available more information at a single convenient location.

Regarding claims 2 and 6, Ghitea, Jr. teaches the use of bar graph (Fig. 5) to display information.

Regarding claims 3-4 and 7-8, Ghitea, Jr. teaches the use of different colors (color coding) to display different information. See col. 11, lines 54-59.
